CLOTHES DON'T MAKE THE MAN (OR WOMAN), BUT GENDER IDENTITY MIGHT

JENNIFER L. LEVI*

The Ninth Circuit's recent decision in *Jespersen v. Harrah's Operating Co., Inc.*¹ reflects the blinders on many contemporary courts regarding the impact of sex-differentiated dress requirements on female employees.² Although some courts have acknowledged the impermissibility of imposing sexually exploitive dress requirements,³ they have done so only at the extreme outer limits, ignoring the concrete harms experienced by women (and men) who are forced to conform to externally imposed gender norms.

On the other hand, some transgender litigants have recently succeeded in challenging sex-differentiated dress requirements.⁴ This success is due in part to their incorporation of disability claims based on the health condition associated with each litigant's transgender identity.⁵ Such an approach has allowed transgender litigants to introduce evidence of the

essentialism of gender identity and its inelasticity for a specific individual.⁶ In combining disability claims with sex discrimination claims, transgender litigants have advanced a broader agenda of challenging normative beliefs about gender for all persons, transgender and non-transgender alike.

Postmodern theorists who have exposed the social construction of gender have been instrumental in expanding the scope of sex discrimination laws. By showing that there is nothing natural or essential about stereotypical assumptions about gender—for example, that women are naturally weaker than men—these theorists have moved courts to help both women and men out of the double binds that limit their career advancement.⁷ For example, most courts now recognize that enforcing gender-based stereotypes that restrict women from being successful investment bankers⁸ or men from being successful nursery school teachers⁹ amounts to sex discrimination.

However, there remains a seemingly impenetrable boundary to successful challenges of widely accepted gender norms. This Article argues that until courts understand the inelasticity of gender for most individuals alongside its social construction, sex discrimination claims will have limited utility.

Part I of this Article explores at least one root of the problem influencing courts that hear dress code challenges—something this Article

⁶ See *infra* note 104. See also *Farmer v. Brennan*, 511 U.S. 825, 829 (1994) (defining a transsexual individual as “one who has ‘[a] rare psychiatric disorder in which a person feels persistently uncomfortable about his or her anatomical sex,’ and who typically seeks medical treatment including hormonal therapy and surgery to bring about a permanent sex change” (quoting AMERICAN MEDICAL ASSOCIATION, *ENCYCLOPEDIA OF MEDICINE* 1006 (1989))).

⁷ The paradigmatic example of this double bind was at issue in the case of *Price Waterhouse v. Hopkins*, 490 U.S. 228 (1989). In that case, Ann Hopkins brought a sex discrimination claim against Price Waterhouse after its failure to promote her to partnership. *Id.* at 231-32. The double bind she faced was that she was denied partnership because of her failure to act sufficiently feminine, and yet, had she acted feminine, she would assuredly also have been denied. *Id.* at 235. At the time Hopkins was recommended for partner, Price Waterhouse had 662 partners of which seven were women. *Id.* at 233. Hopkins was recommended for partnership along with eighty-seven others, all of whom were men. *Id.*

⁸ *Id.* at 251-52 (supporting a discrimination claim based on sex stereotyping by those reviewing a female employee for promotion).

⁹ See *DeSantis v. Pacific Tel. & Tel. Co., Inc.*, 608 F.2d 327, 328 (9th Cir. 1979). The court considered *Strailey v. Happy Times Nursery School, Inc.*, consolidated on appeal with *DeSantis*, in which a male nursery school teacher alleged that he had been subjected to gender discrimination when he was fired from his job shortly after he wore a small earring to work. The court denied that he had suffered gender discrimination, instead classifying discrimination based on non-conformance with gender stereotypes as akin to discrimination based on sexual orientation. *Id.* at 332. Under the analysis of gender discrimination applied by the Ninth Circuit in *Rene v. MGM Grand Hotel, Inc.*, 305 F.3d 1061, 1067-68 (9th Cir. 2002), it seems that the court would reach a different outcome today.

will refer to as “the collective hunch theory,” which others have referred to as “normative stereotypes.” It then analyzes the *Jespersen* case and compares it to two other cases where transgender litigants brought challenges to sex-differentiated dress codes. Part I concludes by analyzing how the incorporation of disability claims by the transgender litigants humanized their pain and, arguably, affected the outcomes of their cases. Part II advocates bringing disability claims where available for transgender plaintiffs and responds to some of the criticisms against doing so. Finally, Part III offers suggestions for framing and litigating future dress code challenges pursued on behalf of non-transgender litigants. In the process, it highlights the limitations of the post-modern insight that gender is socially constructed and its potential negative effect on cases brought by non-transgender litigants. Part III concludes by reconciling a seeming conflict between the social construction theory of gender and the arguably essentialist position advanced by this Article.

I. IGNORING HER PAIN, ACKNOWLEDGING THEIRS

A. Collective Hunch Theory

Unfortunately, the post-modern insight that gender is socially constructed¹⁰ has not broadly convinced courts that every gender-based distinction or requirement in the workplace is impermissible sex discrimination. The limits of this insight are best seen in dress code cases, where the *Jespersen* outcome—affirming a sex-differentiated dress and appearance requirement—is common.¹¹ Courts seem to reject these claims

¹⁰ See Terry S. Kogan, *Transsexuals and Critical Gender Theory: The Possibility of a Restroom Labeled “Other,”* 48 HASTINGS L.J. 1223, 1228-35, (1997) (discussing gender as social construct and the tension between that idea and transsexualism); JUDITH BUTLER, *GENDER TROUBLE: FEMINISM AND THE SUBVERSION OF IDENTITY* (1990).

New York Mercantile Exch.*, 101 F.3d 907, 908 (2d Cir. 1996) (upholding an employer’s policy which required male employees to have short hair, but which did not require the same for female employees); *Wislocki-Goin v. Mears*, 831 F.2d 1374, 1380 (7th Cir. 1987) (dismissing a Title VII claim alleging that a grooming policy imposed unduly harsh requirements on women); *Fountain v. Safeway Stores, Inc.*, 555 F.2d 753, 755-56 (9th Cir. 1977) (requiring male, but not female, employees to wear ties was not sex discrimination under Title VII); *Barker v. Taft Broad. Co.*, 549 F.2d 400, 401 (6th Cir. 1977) (upholding a policy that limited the manner in which hair of men could be cut and that limited the manner in which women’s hair could be styled); *Earwood v. Continental Se. Lines, Inc.*, 539 F.2d 1349, 1351 (4th Cir. 1976) (finding sex differentiated grooming standards consistent with Title VII); *Longo v. Carlisle DeCoppet & Co.*, 537 F.2d 685, 685 (2d Cir. 1976) (upholding a policy which required short hair for men, but not women); *Knott v. Missouri Pac. R.R. Co.*, 527 F.2d 1249, 1252 (8th Cir. 1975) (finding grooming policy that “reflect[ed] customary modes of grooming” acceptable even though differences in policy existed for men and women); *Dodge v. Giant Food, Inc.*, 488 F.2d 1333, 1336 (D.C. Cir. 1973) (upholding a policy that prohibited only men from wearing long hair); *Austin v.*

based on the principle that, at some point, there is a zone of permissible gender-based distinction based on what scholar Anthony Appiah calls “normative stereotypes.”¹²

Appiah defines a “normative stereotype” as a social consensus on how members of a group should “behave in order to conform appropriately to the norms associated with membership in their group.”¹³ He argues that normative stereotypes and the different treatment groups receive as a result of them are not negative or invidious because the stereotypes are based on social norms, not intellectual error.¹⁴ In arguably reductive fashion, Appiah maintains that normative stereotypes are unobjectionable because they are different from “false stereotypes,” reflected in, for example, negative and factually inaccurate racial stereotypes, and “statistical stereotypes,” which are sometimes true for some members of a group but not all.¹⁵ Appiah’s analysis, while helpful in describing differences among types of stereotypes, does not explain why the ubiquity of social norms condones them. Instead, Appiah suggests that social norms and normative stereotypes may be enforceable because, at some level, the support for them is so widespread. This unarticulated justification for creating an exception to non-discrimination law drives the *Jespersen* court’s analysis.

A different characterization of the motivating principle behind the *Jespersen* holding, as well as other cases upholding sex discriminatory dress codes, is “the collective hunch theory.” Under this theory, even if there are some individuals harmed by certain gender-based requirements, courts refuse to conclude that the imposition of gender-based requirements could be actionable, particularly when imposed on non-transgender individuals. The collective hunch is that gender requirements, especially those concerning dress and appearance, are acceptable, and should survive challenge in most circumstances. What seems to fuel this collective hunch theory is that everyone has a gender identity and expression, meaning an internalized or felt sense of being male or female, and that for most people

Wal-Mart Stores, Inc., 20 F. Supp. 2d 1254, 1257 (N.D. Ind. 1998) (finding acceptable under Title VII a grooming policy requiring male employees to maintain their hair length above the collar); *Rogers v. American Airlines, Inc.*, 527 F. Supp. 229, 231 (S.D.N.Y. 1981) (upholding a “policy that prohibits to both sexes a style more often adopted by members of one sex” under a Title VII challenge); *Lanigan v. Bartlett and Co. Grain*, 466 F. Supp. 1388, 1392 (D. Mo. 1979) (finding a sex discrimination claim insufficient where an employer prohibited female, but not male, employees from wearing pantsuits in the executive office).

¹⁵ *Id.*

who identify as female, the expression of that gender identity coincides with feminine, while for most people who identify as male, the expression of that gender identity coincides with masculine.¹⁶ Many judges hearing a challenge to a sex-differentiated workplace rule imagine how they themselves might respond and surmise that if they are comfortable with the rule, then others should be as well.¹⁷

B. Jespersen Analysis

In *Jespersen v. Harrah's Operating Co., Inc.*, plaintiff Darlene Jespersen, an employee of defendant company for twenty years, challenged a sex-differentiated grooming policy imposed on Harrah's employees.¹⁸ Among other things, the policy required female, but not male, bartenders to tease, curl, or style their hair and wear stockings and nail polish.¹⁹ It also required them to attend a "Personal Best" program which taught them how to maximize their appearance and conform to that appearance on a daily basis at their job.²⁰

Jespersen found the requirements so inconsistent with her gender identity that she ultimately declined to comply with them.²¹ Prior to the implementation of the grooming code, Jespersen's employer had suggested, but not required, that women employees wear make-up; Jespersen tried wearing makeup for a short period of time,²² but stopped, however, when

¹⁶ For others, many of whom (but not all) identify as transgender, the fit is otherwise.

¹⁷ This analysis focuses on the judge because most of these cases are resolved on dispositive motions. The collective hunch theory can as easily apply to jurors as judges.

¹⁸ See *Jespersen v. Harrah's Operating Co., Inc.*, 392 F.3d 1076, 1078 (9th Cir. 2004), *reh'g granted*, 409 F.3d 1061 (9th Cir. 2005). For the previous twenty years that Jespersen worked at Harrah's, her employer encouraged her and other female beverage servers to wear makeup although it was not a job requirement. *Id.* at 1077. It was not until 2000 that Harrah's implemented its "Beverage Department Image Transformation" program, imposing "appearance standards" on its employees. *Id.* Although all beverage servers, regardless of gender, were required to "[be] well groomed, appealing to the eye, be firm and body toned, and be comfortable with maintaining this look while wearing the specified uniform," it incorporated sex-differentiated requirements to carry out its goals. *Id.* Notably, women were required to wear colored nail polish, make-up, and styled hair; men were prohibited from doing so. *Id.*

¹⁹ *Id.*

²⁰ *Id.* at 1078. Harrah's also required its male employees to abide by the male Personal Best standards, which included "maintain[ing] short haircuts and neatly trimmed nails." *Id.* at 1081.

²¹ *Id.* at 1077.

²² *Id.*

she found that wearing it “made her feel sick, degraded, exposed, and violated.”²³ As the Ninth Circuit explained, she “felt that wearing makeup ‘forced her to be feminine’ and to become ‘dolled up’ like a sexual object, and . . . ‘took away [her] credibility as an individual and as a person.’”²⁴ Notably, during the litigation, Harrah’s never questioned Jespersen’s sincerity regarding her response to the make-up requirement.

As a result of Jespersen’s refusal to cooperate with the newly imposed grooming policy, Harrah’s terminated her.²⁵ Jespersen sued, alleging that the “Personal Best” requirement constituted disparate treatment based on sex discrimination.²⁶ The basis of her claim was simple—the “Personal Best” program required women, but not men, to conform to certain dress and make-up requirements and, therefore, constituted disparate treatment based on sex.²⁷ According to the Ninth Circuit and well-established law, in order to prevail, Jespersen only had to prove that “but for” her sex, she would have been treated differently.²⁸ A clearer case could hardly have been framed.

Notwithstanding the clarity and simplicity of her claim, the Ninth Circuit rejected it in a surprisingly brief decision, finding that, although different standards were imposed on male and female employees, there was no class-based harm; Jespersen could not demonstrate that the differential treatment amounted to an unequal burden on women.²⁹ Citing a broad doctrinal exception to the general rule for proving a disparate treatment claim, the court explained that it had “previously held that grooming and appearance standards that apply differently to women and men do not constitute discrimination on the basis of sex.”³⁰ The court’s interpretation of this doctrinal exception was that, in the case of differential dress and appearance standards, the court should apply an unequal burdens test that focused on whether female employees are more significantly burdened than their male counterparts.³¹

²⁹ *Id.* at 1083.

³⁰ *Id.* at 1080.

³¹ *Id.*

As an initial matter, the Ninth Circuit's suggestion that an "unequal burdens" test is automatically applicable in dress code cases conflicts with precedent. Since dress codes and sex discrimination are not mutually exclusive categories, many courts have delineated the circumstances where sex-differentiated dress codes violate prohibitions against discrimination. They have not uniformly done so by comparing requirements for male and female employees in the workplace.³² While it is hard to reconcile these inconsistent outcomes, some generalizations can be drawn, at least as to when dress codes violate sex discrimination prohibitions. For example, some courts have struck down sex-differentiated dress codes because they were applied differently to men and women without sufficient justification.³³ Others have held that even a sex-neutral dress code may violate the law if it is applied in a discriminatory fashion.³⁴ Still others have struck down sex-specific dress codes because a particular hardship fell on only one sex in its application.³⁵

While courts have used the "unequal burdens" language in evaluating the legitimacy of dress codes, they have generally not applied that test as mechanistically as the Ninth Circuit did in *Jespersen*, essentially evaluating whether the "Personal Best" program imposed the same time burdens on men and women.³⁶ The Ninth Circuit characterized the

³² See *infra* notes 33-35 and accompanying text.

³³ See *Gerdorn v. Continental Airlines, Inc.*, 692 F.2d 602, 609 (9th Cir. 1982) (holding Continental's desire to compete by featuring attractive female cabin attendants insufficient to support a discriminatory weight requirement).

³⁴ See *Harding v. Goodyear Tire and Rubber Co.*, 929 F. Supp. 1402, 1406 (D. Kan. 1996) (considering evidence that a "no tank tops" requirement only applied to female employees could support inference of sex discrimination); *Tamimi v. Howard Johnson Co.*, 807 F.2d 1550, 1553-54 (11th Cir. 1987) (finding that the creation of facially neutral makeup rule was evidence of a pretext for sex discrimination).

³⁵ See *O'Donnell v. Burlington Coat Factory Warehouse, Inc.*, 656 F. Supp. 263, 266 (S.D. Ohio 1987) (finding a dress code requiring female sales clerks to wear a "smock" while allowing male sales clerks to wear shirts and ties impermissible, even absent a discriminatory motive, because it perpetuated sexual stereotypes); *E.E.O.C. v. Sage Realty Corp.*, 507 F. Supp. 599, 611 (S.D.N.Y. 1981) (finding a sexually provocative uniform requirement impermissible); *Marentette v. Michigan Host, Inc.*, 506 F. Supp. 909, 912 (E.D. Mich. 1980) (concluding that a sexually provocative dress code may violate Title VII); *Carroll v. Talman Fed. Sav. and Loan Ass'n of Chicago*, 604 F.2d 1028, 1029-30 (7th Cir. 1979) (striking down a dress code that required women to wear a uniform but allowed men to wear business suits).

³⁶ Cf. *Gerdorn*, 692 F.2d at 605-06. The court considered the "burdens" on women in comparison to men in deciding the discrimination claim, but the discussion of "burdens" came in response to defendant's argument. The defendant argued that its policy was similar to previous policies that had been upheld by the court, and the court proceeded to distinguish the case before it by focusing on the unduly harsh burdens imposed solely on women.

application of this test to *Jespersen* as one of first impression,³⁷ arguably because it misinterpreted the unequal burdens precedent.

Further, rather than acknowledging that sex discrimination law protects individuals, not just classes of individuals, the Ninth Circuit turned Title VII on its head by interpreting its precedent to mean that *Jespersen* could not prevail unless her case demonstrated that *all* women are burdened, not just those who, like her, are offended and harmed by having to wear make-up. As a result, the Ninth Circuit departed from well-established law. Moreover, even if the court had correctly identified how other courts had applied the unequal burdens test, the Harrah's policy could not have survived it. The court basically concluded that *Jespersen* could not prove her case because she had not introduced evidence that could establish that wearing make-up on a daily basis pursuant to the "Personal Best" program would take more money or time than was required by the men to "maintain short haircuts and neatly trimmed nails."³⁸ One can only conclude that the judges either never applied make-up on a daily basis or drew their conclusion so reflexively that they could not imagine the extra time, energy, and money the makeup rule required.³⁹

C. Behind the *Jespersen* Analysis

The *Jespersen* outcome, though wrong, was not surprising, given the widespread notion that forced conformity to normative beliefs about appropriate gender expression is perfectly acceptable. This notion is hard to justify under any application of a disparate treatment test. Taken seriously, disparate treatment means just that—a female plaintiff may prove a claim by demonstrating a male employee would be treated differently. By definition, sex-differentiated dress and appearance requirements are disparate treatment. Regardless, since many challenges to them have failed, a closer analysis is warranted.⁴⁰

The justifications for sustaining sex-differentiated dress codes, both theoretical and judicial, can best be characterized as lacking substance.

³⁷ See *Jespersen v. Harrah's Operating Co., Inc.*, 392 F.3d 1076, 1080 (9th Cir. 2004), *reh'g granted*, 409 F.3d 1061 (9th Cir. 2005).

³⁸ *Id.* at 1081.

³⁹ Perhaps the easiest way to expose the flaw in the court's analysis is to recognize that both women and men had to maintain haircuts and have neat-appearing nails. *Id.* The women's requirements to wear make-up, stockings, nail polish, and have teased, styled, or curled hair was above and beyond those minimal requirements imposed on both men and women.

⁴⁰ See *supra* note 11. See also Annotation, *Employer's Enforcement of Dress or Grooming Policy as Unlawful Employment Practice Under § 703(a) of Civil Rights Act of 1964 (42 U.S.C.A. § 2000e 2(A))*, 27 A.L.R. Fed. 274, § 3 (2005) (discussing numerous failed dress code and grooming policy challenges).

Perhaps more charitably, they could be referred to as defense by analogical reasoning. The proponent of sex distinctions argues that, because all, or at least most, persons would agree that it is not harmful to enforce some sex stereotypes, figuring out where to draw the line when enforcement is inappropriate entails drawing the line around widely shared normative beliefs about appropriate gender expression.

This form of defense has been advanced, for example, by Robert Post.⁴¹ Professor Post looks for examples of employment that discriminate on the basis of sex that he believes most would agree are justified.⁴² The examples he considers concern matters of privacy where an individual—a woman in all of his scenarios—is exposed or vulnerable. Because he believes most people would want a court to sustain a sex-differentiated job requirement in such circumstances, he maintains that the disparate treatment is not unlawful.⁴³ Finding the right example is key to Post's argument, and the ones he chooses are those to which nearly everyone can relate, since even if the reader has never been in a comparably vulnerable position, he or she can imagine a relative, dependent, or friend who has or could be. His quintessential example is when an elderly woman has to be bathed.⁴⁴ Post argues that, naturally, the elderly woman should be able to preference hiring a female attendant, a position supported by at least one court.⁴⁵ In doing so, he presumes that there is little harm associated with this normative belief about what people are or are not uncomfortable with. This, of course, ignores the harm to the male applicant who has no interest in invading anyone's privacy, is qualified for the position, and needs the money.

The problem with Post's reasoning, much like the problem with the *Jespersen* court's analysis, is that no amount of hand-waving or analogical reasoning can deny the fact that, despite widespread normative beliefs and conformity to gender stereotypes, many people do suffer real harm from being subjected to these beliefs and stereotypes. Further, not everyone shares prevailing societal norms.⁴⁶ The difficulty for courts is that judges who are, by and large, men and women who share the societal norms do not

⁴¹ See Robert Post, *Prejudicial Appearances: The Logic of American Antidiscrimination Law*, 88 CAL. L. REV. 1 (2000).

experience the harms associated with forced gender conformity. Therefore, they often cannot imagine the extent of the harm it causes.⁴⁷

D. The Transgender Cases

In contrast to *Jespersen*, cases where litigants have been transgender, and therefore better able to plead and highlight the specific harms of forced conformity, have afforded plaintiffs more success. Consider, for example, the case of *Doe ex rel. Doe v. Yunits*.⁴⁸ Pat Doe was a fifteen-year-old student who sued the principal of her junior high school when he refused to allow her to attend school wearing girls' clothing.⁴⁹ Pat had been diagnosed with Gender Identity Disorder (hereinafter "GID") and, although born biologically male, she had a female gender identity.⁵⁰ As a result, her treating therapist concluded "that it was medically and clinically necessary for plaintiff to wear clothing consistent with the female gender and that failure to do so could cause harm to plaintiff's mental health."⁵¹

Although the court did not describe it as such, the case, in essence, was a challenge to a sex-differentiated dress code. The policy itself was gender neutral, prohibiting "clothing which could be disruptive or distractive to the educational process or which could affect the safety of students."⁵² As interpreted by the principal, however, this meant that Doe, a biologically male student, could not wear "padded bras, skirts or dresses, or wigs."⁵³ By contrast, biologically female students were not categorically prohibited from wearing such clothing. As a result, the case, like *Jespersen*, was a dress code challenge.

In ruling in Doe's favor, the court did not even mention any dress code exceptions to sex discrimination law. Rather, the court applied the

⁴⁷ Perhaps more accurately, most judges cannot understand the extreme harm caused by forced gender conformity. They likely do have some concept of how forced gender conformity affects individuals like themselves. However, because they may have experienced it as simply a minor inconvenience (because they have never faced forced conformity to a gender norm in any way grossly inconsistent with their gender identity) it is easy to minimize a litigant's related (but vastly different) experience. After all, if judges have no experience with which to compare a case before them, then they are less likely to use themselves as a measure of evaluating the plaintiff's experience.

⁴⁸ 2000 WL 33162199 (Mass. Super. Ct. 2000). This author served as counsel for Pat Doe in her capacity as Senior Staff Attorney at Gay & Lesbian Advocates & Defenders.

⁵³ *Id.* at *2.

traditional disparate treatment rule to which the *Jespersen* court adverted. As the *Doe* court explained, “the right question is whether a female student would be disciplined for wearing items of clothes plaintiff chooses to wear. If the answer to that question is no, plaintiff is being discriminated against on the basis of her sex, which is biologically male.”⁵⁴

The court did distinguish the case from one that found a dress code exception.⁵⁵ However, the distinction was based on the reason why plaintiff challenged the dress requirement.⁵⁶ Notably, in distinguishing the case from one affirming a sex-specific dress code, the court found relevant that the plaintiff sought to wear girls’ clothing in order to express her personal identity, holding that suppression of that identity, simply because it “departs from community standards,” would be impermissible.⁵⁷

By way of distinguishing the *Jespersen* analysis, it is useful to consider a second case involving, essentially, a dress code challenge. In *Enriquez v. West Jersey Health Systems*, a transsexual plaintiff brought a claim against her employer when she was terminated during the process of transitioning from male to female.⁵⁸ Carla Enriquez had been a practicing pediatrician for over twenty years when she was hired by defendant West Jersey Health Systems to be the medical director of an outpatient treatment facility.⁵⁹ Less than a year after being hired, she began the process of transitioning.⁶⁰ She “shaved her beard and eventually removed all vestiges of facial hair. She sculpted and waxed her eyebrows, pierced her ears, started wearing emerald stone earrings, and began growing breasts.”⁶¹ Several co-workers and supervisors grew uncomfortable with her process of transitioning in the workplace and confronted her.⁶² According to Enriquez, one supervisor told her to “stop all this and go back to your previous appearance!”⁶³ Following some administrative changes at her place of

employment, Enriquez was required to renegotiate her contract.⁶⁴ At that time she was told, “[N]o one’s going to sign this contract unless you stop this business that you’re doing.”⁶⁵ The implication was clearly that, unless she conformed to male gendered stereotypes, her employment would not be continued. Shortly thereafter, Enriquez was terminated.⁶⁶

Although not explicitly a dress code case because no dress code was cited as justification, Enriquez’s underlying sex discrimination claim is doctrinally indistinguishable from those brought by Pat Doe and Darlene Jespersen. As in *Doe*, the *Enriquez* court sustained the plaintiff’s claim.⁶⁷ The court never considered whether there was some exception to sex discrimination law for dress codes. It did, however, analyze whether there was some exception to sex discrimination law for transsexual persons.⁶⁸ It concluded that there was not.⁶⁹

One key difference between *Jespersen* on the one hand and *Doe* and *Enriquez* on the other is the incorporation of disability claims on behalf of Doe and Enriquez, and, more importantly, extensive discussion of the centrality of gender expression and its inelasticity.⁷⁰ While completely irrelevant to the sex discrimination claim, the existence of the disability claim itself allowed the introduction of evidence relating to the condition of being transgender and the sincere reasons why the plaintiff could not conform to a sex-differentiated dress requirement.⁷¹ As a result, the *Doe* and *Enriquez* courts had a more specific and concrete understanding of how painful it is to require the plaintiff to conform to the particular expectation of gender at issue in the case. Even though the harm of gender conformity had no relevance to the sex discrimination claim, the outcome in the two cases was quite different.

Notably, both the *Doe* and *Enriquez* decisions reflected the fact that the courts could imagine the specific harm a transgender litigant might

⁶⁴ *Id.*

⁷⁰ See *id.* at 369-70; *Doe ex rel. Doe v. Yunits*, 2000 WL 33162199, at *2-6 (Mass. Super. Ct. 2000).

⁷¹ See *Enriquez*, 777 A.2d at 370-71 (describing in depth the plaintiff’s gender dysphoria diagnosis); *Doe*, 2000 WL 33162199, at *7 (describing gender-specific dress code requirements as “stifling of [the] plaintiff’s selfhood”).

experience from forced conformity to gender norms.⁷² For example, in *Enriquez*, the New Jersey Superior Court referred in detail to a letter Enriquez wished to send to her patients explaining her condition. The letter, in part, stated:

Current research tells us that early in fetal development, the infant's brain undergoes masculinization or feminization unrelated to chromosomal complement. Later, as we grow up, we identify with the 'cortical' or brain gender we were endowed with. Happily, for the majority of the population, the genetic (or chromosomal gender) and the cortical (or brain gender) are congruent. . . . [S]ome people do not have this harmony. We call these feelings 'dysphoria' in medicine. Literally, this means 'unhappy,' but doctors have expanded its meaning to describe conditions that significantly effect [sic] the individual. Gender Dysphoria describes a condition in which there is not this harmony. The physical and the inner selves are at odds.⁷³

Although irrelevant to the sex discrimination claim or its analysis, the language seemed to move the court in its interpretation of the New Jersey Law Against Discrimination. Acknowledging that some states are split on the issue of whether transgender people are excluded from state sex discrimination laws,⁷⁴ the New Jersey court concluded that

it is incomprehensible to us that our Legislature would ban discrimination against heterosexual men and women; against homosexual men and women; against bisexual men and women;

⁷² See *Doe*, 2000 WL 33162199, at *8. The court stated that the school had suspended Doe "on account of the expression of her very identity," and in ruling in Doe's favor, the court considered the harm that Doe would suffer if she was not allowed to return to school in clothing which conformed to her gender identity. "[I]f plaintiff is barred from school, the potential harm to plaintiff's sense of self-worth and social development [would be] irreparable." See *Enriquez*, 777 A.2d at 373. The court discussed gender and its relation to one's sense of self before concluding that the law should prohibit discrimination on the basis of sex or gender. In the end, the court agreed with the notion that "a person's sex or sexuality embraces an individual's gender, that is, one's self-image, the deep psychological or emotional sense of sexual identity and character." *Id.* (citation omitted).

⁷³ See *Enriquez*, 777 A.2d at 370.

⁷⁴ *Id.* at 372. The court considered the following cases before coming to its conclusion: *Sommers v. Iowa Civil Rights Comm'n*, 337 N.W.2d 470, 474 (Iowa 1983) (concluding that the word "sex" in Iowa's Civil Rights Act does not include transsexual people); *James v. Ranch Mart Hardware, Inc.*, 881 F. Supp. 478, 481 (D. Kan. 1995) (holding that a male-to-female transsexual could not sue for discrimination under Kansas law); *Underwood v. Archer Mgmt. Servs., Inc.*, 857 F. Supp. 96, 98 (D.D.C. 1994) (finding that, under the District of Columbia's Human Rights Act, transsexuality is not a "sex"); *Maffei v. Kolaeton Indus., Inc.*, 626 N.Y.S.2d 391, 395-96 (Sup. Ct. 1995) (interpreting the word "sex" in a state anti-discrimination law to include transsexual people).

against men and women who are perceived, presumed or identified by others as not conforming to the stereotypical notions of how men and women behave, but would condone discrimination against men or women who seek to change their anatomical sex because they suffer from a gender identity disorder.⁷⁵

It is likely that the incorporation of the medical information relating to the compelling reasons why someone would undergo that physical transformation moved the court in its analysis.

Similarly, in *Doe*, the plaintiff stated as part of her case that she was diagnosed with childhood GID and that it was due to this diagnosis that a treating therapist advised that it was medically and clinically necessary for the plaintiff to wear clothing consistent with her female gender identity.⁷⁶ In the context of a student plaintiff, this information seemed to move the court in framing the question as it did—whether the school would treat a biologically female student the same by similarly disciplining her for wearing female clothing.⁷⁷ If not, the court concluded, the plaintiff could prove her disparate treatment claim.⁷⁸ Importantly, the court understood that *Doe* was motivated to wear the clothing for which she was disciplined for genuine reasons and not for the purposes of causing disruption.⁷⁹ This allowed the court to distinguish the case from others in which courts disallowed related claims brought by non-transgender litigants.⁸⁰

Comparison of these cases suggests that successes have been achieved on behalf of transgender litigants because litigating sex discrimination in those cases offers a vehicle for challenging normative beliefs about gender in a way that is less threatening to the non-transgender judges who adjudicate them. In other words, because courts have been able conceptually to marginalize the impact of their decisions to a minority community (of transgender persons), it may be easier for them to allow

⁷⁵ *Enriquez*, 777 A.2d at 373.

⁷⁶ *See Doe*, 2000 WL 33162199, at *1.

⁷⁷ *Id.* at *6 (stating that “[s]ince plaintiff identifies with the female gender, the right question is whether a female student would be disciplined for wearing items of clothes plaintiff chooses to wear”).

⁷⁸ *Id.*

⁷⁹ *Id.* at 6 n.5.

⁸⁰ *Id.* (distinguishing *Harper v. Edgewood Bd. of Educ.*, 655 F. Supp. 1353 (S.D. Ohio 1987)). As the *Doe* court explained, in *Harper*, the student plaintiffs were unsuccessful because their challenge to a gender-specific prom dress code stemmed from “rebellious acts to demonstrate a willingness to violate community norms,” and was not for the purpose of expressing their personal identity.

some small incursion into widely-held beliefs about the fundamental differences between men and women.

In contrast to the understanding of the *Doe* and *Enriquez* courts of the plaintiffs' perceived need to violate gender norms, the *Jespersen* court belittled the burden that a sex-differentiated dress code imposed on the plaintiff, all but ignoring the individual harm alleged.

II. IN DEFENSE OF DISABILITY

Bringing a disability claim along with a sex discrimination claim has sometimes been the key to successful challenges of sex-differentiated dress codes. It humanizes the plaintiff, helps convince courts of the seriousness of the underlying claims, and counteracts the collective hunch theory by giving a judge a basis for removing him or herself as the evaluator of the harm of a sex-differentiated rule. A disability claim gives a court a construct for understanding why someone cannot conform to a gender stereotype and does so in language a judge can understand. That is, different health conditions are widely understood to change the way an individual might respond to a particular job requirement, making the judge without the health condition a poor arbiter of the job requirement's effects. By incorporating a medical claim associated with one's gender identity or gender expression, courts can distance themselves from the particular facts and circumstances of a case and take seriously the dysphoria experienced by a plaintiff's forced conformity to a gender norm.

Nevertheless, some have criticized the incorporation of disability counts into claims of discrimination brought by transgender litigants. The basis of the criticisms is not the effectiveness of bringing a disability claim.⁸¹ Rather, the criticisms stem principally from the stigma of disability

⁸¹ As an initial matter, of course, federal disability law, the Americans with Disabilities Act, and the Federal Rehabilitation Act contain an express exclusion for transgender litigants. See 42 U.S.C. § 12211(b)(1) (2005). Despite this exclusion at the federal level, many state (and local) laws contain no such express exclusion and have been used successfully by transgender litigants. See *Jette v. Honey Farms Mini Market*, 2001 WL 1602799, at *3 (Mass. Comm'n Against Disc. 2001) (interpreting a Massachusetts discrimination statute as providing protection for transsexual people); *Enriquez v. West. Jersey Health Sys.*, 777 A.2d 365, 373 (N.J. Super. Ct. App. Div. 2001) (finding protection for transsexual persons under New Jersey discrimination statute); *Doe ex rel. Doe v. Yunits*, 2000 WL 33162199, at *6 (Mass. Super. Ct. 2000) (finding Massachusetts law against sex discrimination applicable where a student with GID was prevented from wearing feminine clothing); *Maffei v. Kolaeton Indus., Inc.*, 626 N.Y.S.2d 391, 395-96 (N.Y. Sup. Ct. 1995) (interpreting the word "sex" in a New York City ordinance prohibiting discrimination as protective of transsexual people); *Doe v. Electro-Craft Corp.*, 1988 WL 1091932, at *7 (N.H. Super. 1988) (concluding that New Hampshire law against discrimination does encompass protection for transsexualism as a protected handicap). See also *Smith v. City of Jacksonville* Corr. Inst., 1991 WL 833882, at *14 (Fla. Div. Admin. Hrgs. 1991) (holding that an individual with gender dysphoria is within the disability coverage of the Florida Human Rights Act, as well as the portions of the Act prohibiting discrimination based on perceived disability); *Evans v. Hamburger Hamlet & Forncrook*, 1996 WL 941676, at *9 (Chi. Com.

and reflect central misunderstandings of disability law. Four basic criticisms emerge. First, people have a reflexive aversion to being included within the stigmatized community of disability.⁸² Second, some argue that a disability theory is under-inclusive because it may not be available to all persons who identify as transgender, specifically those who reject a medical diagnosis as being at the root of their identity. Third, a class-based critique raises a concern about the medicalization of the transgender condition.⁸³ Finally, a post-modern approach that seeks to disaggregate sex and gender concludes that, because all gender is culturally defined,⁸⁴ an essentialist approach, which only crassly describes a disability model, should be rejected.⁸⁵

The first of these objections, rooted in the stigma associated with health conditions, should not guide litigation choices because it exacerbates the stigma that disability laws seek to redress while ignoring the reality of the transgender condition and identity for many individuals. As to the first of these points, the distinction between the use of the word “disability” in non-discrimination laws and its use in, for example, entitlement programs must be noted. The purpose of disability non-discrimination laws is to protect individuals who, despite a health condition, are able to work but are prevented from doing so because of the prejudice of others.⁸⁶ As a result, the word “disability” that appears in non-discrimination laws describes a health condition, but not conditions that preclude an individual from performing the essential elements of a job with or without accommodation.⁸⁷ In other words, unlike the word “disability” that appears

Hum. Rel. 1996) (denying the defendant’s motion to dismiss a disability claim brought by a transsexual plaintiff).

⁸² See Dean Spade, *Resisting Medicine, Re/modeling Gender*, 18 BERKELEY WOMEN’S L.J. 15, 34 (2003). Spade relates the concern that “trans people do not want to be seen as ‘disabled’” because it implies that to be transgendered is to be flawed.

⁸³ *Id.* at 35. Spade expresses particular concern that the use of disability claims and the medical model of gender identity disorder in general means that lower income individuals will be denied protections available to wealthier individuals because they lack the resources necessary to access a GID diagnosis.

⁸⁴ Katherine M. Franke, *The Central Mistake of Sex Discrimination Law: The Disaggregation of Sex From Gender*, 144 U. PA. L. REV. 1 (1995).

⁸⁵ These objections, and an affirmative case for bringing disability claims on behalf of transgender individuals, have been made elsewhere. TRANSGENDER RIGHTS (Paisley Currah et al. eds., forthcoming 2006).

⁸⁶ LAURA F. ROTHSTEIN, *DISABILITIES AND THE LAW* 26-27, 266 (2d ed. 1997).

⁸⁷ See *Jackson v. Veterans Admin.*, 22 F.3d 277, 279-80 (11th Cir. 1994) (finding that an employee with rheumatoid arthritis who was terminated from housekeeping job did not have a valid discrimination claim because he was unable to meet his job attendance requirements).

in entitlement programs,⁸⁸ the language of non-discrimination law does not reflect the use of the word “disability” in the vernacular.⁸⁹

As a result, the main point of disability law is to ensure that individuals who can work despite having a health condition (or having a history of such condition or being perceived as such) should not be prevented from doing so because of the stigma attached to the condition. To avoid relying on disability law for protections because of stigma would exacerbate the problem the laws seek to redress.

Getting beyond the stigma associated with the law, some transgender, as well as non-transgender, individuals balk at relying on such law because of the often incorporated requirement that a litigant demonstrate that the health condition limits a major life activity.⁹⁰ For many transgender people, of course, the condition of being transgender has no impact on their lives. For others, however, the identity or condition, without any medical intervention or care, is seriously limiting.⁹¹ Acknowledging this fact does not, however, universalize that experience or suggest that to be the case for everyone who identifies as transgender. Nor does acknowledging that fact require that every transgender individual follow any particular course of care or treatment for the condition.⁹²

In addition, most disability laws cover not just individuals with a particular health condition but also those who have a history of such

⁸⁸ See 42 U.S.C. § 1382(c)(1) (2005). Supplemental Security Income payments are “determined on the basis of the individual’s . . . income, resources, and other relevant characteristics,” indicating that the program was designed to provide a minimum income to those who are unable to work. In this context, “disabled individual” clearly refers to a person who is unable to work.

⁸⁹ See WEBSTER’S THIRD NEW INTERNATIONAL DICTIONARY 642 (1993). Among the definitions of “disability” is “an inability to do something” and “the condition of being disabled.”

⁹⁰ Spade, *supra* note 82, at 33-34.

⁹¹ See *Kosilek v. Maloney*, 221 F. Supp. 2d 156, 175 (D. Mass. 2002) (finding that an inmate with GID did not receive adequate medical care for a serious medical need because a prison official initiated a blanket policy restricting the treatment options doctors could prescribe for inmates).

⁹² See Franklin H. Romeo, *Beyond a Medical Model: Advocating for a New Conception of Gender Identity in the Law*, 36 COLUM. HUM. RTS. L. REV. 713, 730-32 (2005) (discussing the shortcomings of courts’ reliance on the “medical model” when dealing with transgender litigants). Romeo believes that the medical model is tilted toward those who have the means to access the health care system, and that it does not protect gender nonconforming people who are unable to access trans-friendly health care, intersex people who refuse ‘corrective’ medical procedures, people who identify as genderqueer or otherwise express nontraditional gender identities, people who are unable to physically modify their bodies, and those who choose not to undergo surgical and hormonal treatments in order to express their gender. *Id.*

condition or are regarded as having such a condition.⁹³ Therefore, even for those persons whose transgender identity or condition does not lead to medical care or treatment, disability laws may provide protections as well. The stigma and misunderstandings, therefore, associated both with disability law and transgender identity should not limit the availability of those laws to persons who face discrimination.

In addition to objections based on stigma and under-inclusion, the two remaining most common objections to pursuing disability protections stem from concerns about class and the social construction of gender. The articulation of the first of these objections comes mainly in the form of the following: by pursuing disability law as an avenue for protecting transgender people, many transgender people facing discrimination will not be covered because they cannot afford access to the medical system, either to formally be diagnosed with some condition, like GID, or to purchase hormones or surgeries.⁹⁴ Responding to this objection is straightforward. A medical diagnosis is neither necessary nor sufficient to meet the legal definition of disability in most states.⁹⁵ More fundamentally, one need not demonstrate that one is receiving medical care or treatment in order to demonstrate that he or she has experienced discrimination on the basis of disability.⁹⁶

⁹³ See *Michalski v. Reuven-Bar Levav & Assoc. P.C.*, 625 N.W.2d 754, 759-60 (Mich. 2001). The court interpreted the Michigan Handicappers' Civil Rights Act as requiring the plaintiff to show that the plaintiff was regarded as having a determinable physical or mental characteristic; the perceived characteristic was regarded as substantially limiting one or more of the plaintiff's major life activities; and the perceived characteristic was regarded as being unrelated either to the plaintiff's ability to perform the duties of a particular job or position or to the plaintiff's qualification for employment or promotion. *Id.*; see *Chevron Corp. v. Redmon*, 745 S.W.2d 314, 318 (Tex. 1987) (in considering the Texas antidiscrimination statute, the court found that "in order for a disability to be considered a handicap in the first place it must be one which is generally perceived as severely limiting him in performing work-related functions in general").

⁹⁴ Spade, *supra* note 84, at 35-36.

⁹⁵ Connecticut is one of the rare jurisdictions that defines disability to track disorders included within the Diagnostic and Statistical Manual of Mental Disorders, at least as to mental disabilities. CONN. GEN. STAT. § 17a-540 (2004). See also *Conway v. City of Hartford*, 1997 WL 78585, at *4-5 (Conn. Super. Ct. 1997).

⁹⁶ See, e.g., *Sanglap v. LaSalle Bank, FSB*, 345 F.3d 515, 520 (7th Cir. 2003) (finding "that liability for disability discrimination does not require professional understanding of the plaintiff's condition. It is enough to show that the defendant knew of symptoms raising an inference that the plaintiff was disabled"); *Martinson v. Kinney Shoe Corp.*, 104 F.3d 683, 686 (4th Cir. 1997) (acknowledging that employee may prove discrimination on account of disability by showing that termination was due to physical manifestations of "'specific attributes' of his disease"). In *Martinson*, the termination was due to employee's epileptic seizures. In downgrading the importance of determining whether the termination was due to the epilepsy itself or due to the seizures, the court stated that "[t]o fire for seizures is to fire for a disability." *Id.*

An alternate way to see the fallacy of this objection is to consider it in the context of any other health condition. Would someone possibly object to a person with cancer bringing a claim of disability discrimination simply because the individual could not afford medical treatment for their cancer? Would one possibly object to a pregnant woman bringing a claim of pregnancy discrimination simply because she could not afford pre-natal care?

To ask these questions, hopefully, is to answer them. The ability to afford medical care or treatment is no element of stating a claim of disability discrimination. Moreover, to object to pursuing such claims from a class-based analysis is to turn the analysis on its head. The result of that position is to deny poor people with health conditions protection from discrimination that is otherwise extended to persons of means, an untenable position particularly from the progressive position that launched it.

The second of the latter two objections comes from the post-modern perspective that all gender is socially constructed and that there is nothing essential about gender identity.⁹⁷ This Article fundamentally rejects the premise that there is nothing essential about gender identity upon which this objection is made. Even accepting the underlying premise as true, however, there are several responses to it. First, it bears mentioning that this objection, taken to its logical conclusion, posits that transsexualism does not exist. In other words, this perspective implies that if people could fully embrace their masculinity (from the female-to-male ("FTM") perspective) or femininity (from the male-to-female perspective), despite the social construction of biologically female traits as feminine or biologically male traits as masculine, no one would ever need to take hormones or have surgery to fully express their gender identity. The objection essentially argues that, if masculinity could be re-socially constructed to include any form of chest, then someone who identifies as FTM would not need or want to have chest surgery. This questioning of trans-identity is deeply offensive to many transsexuals and somewhat surprising to those within the transgender community.

Second, a rejection of this objection comes from within the transgender community in the form of an acknowledgement of the interrelatedness of a disease model of disability (which is not even reflected in disability non-discrimination laws as distinct from entitlement programs) and environmental factors. As physician Nick Gorton has explained, a commonplace understanding of disease is that it is "a clinically significant adverse effect or experience for an organism due to an interaction between one or more biological traits of that organism and the environment in which

⁹⁷ See *supra* note 11.

it resides.”⁹⁸ In other words, a disease model itself takes into account the fact that a particular health condition may be present in one’s body and, depending on the environment, either have or not have an adverse or disabling effect. The example Gorton offers is non-insulin dependent diabetes mellitus (“NIDDM”). According to Gorton, the genes that in the “developed world result in NIDDM are not a disease when abstracted from their environment.”⁹⁹ Consequently, if one lives in an environment where food is not in abundance and where people lead non-sedentary lives, then the same genes that in a different context are destructive are actually beneficial because of their greater potential to store fat and preserve energy. NIDDM only results in disease, that is, a “clinically significant adverse effect,” where an individual with such genes is in fact is harmed by said genes.

What Gorton’s argument illustrates is that the transgender condition is neither essentially bad nor good; that is to say, like having NIDDM, being transgender is neither disabling nor benign, at least not in a vacuum. However, the environment in which the condition is experienced ultimately determines whether it constitutes a disabling condition (what he calls disease) or not.¹⁰⁰ Therefore, even for persons who ascribe to a socially contingent understanding of gender identity, a disability discrimination model is appropriate.

Finally, the underlying disagreement about the essentialism of gender, and more specifically transgender identity, need not be resolved in order to advocate pursuing disability protection. Both disability and gender-based claims can be pursued where the discrimination a transgender person experiences is rooted in both. Likely, no one would argue that a Jewish person with Gaucher disease¹⁰¹ should not pursue both disability and

⁹⁸ Nick Gordon, *Toward a Resolution of GID, the Model of Disease, and the Transgender Community*, <http://www.makezine.org/giddisease.htm> (last visited Dec. 20, 2005).

⁹⁹ *Id.*

¹⁰⁰ This debate is not exclusive to the transgender community. Other health conditions are sometimes argued not to constitute disability, often by insurance providers that wish to avoid coverage of a condition. Consider, for example, the condition of infertility, which has no consequences to one’s life absent the desire to have children. One could argue that the condition is a socially constructed one. However, accepting that premise does not refute the serious, adverse consequences for one who has the health condition. In recognition of that, many states have adopted laws to require coverage for the condition of infertility. *See, e.g.*, ALM GL CH. 175, § 47H (2005); 215 ILCS 5/356m (2005); TEX. INS. CODE § 1366.003 (2005); CAL. HEALTH & SAF. CODE § 1374.55 (2005).

¹⁰¹ Gaucher disease is a lipid storage disorder, prevalent among Jewish people of Eastern European ancestry, which causes enlargement of the spleen or liver, anemia, and bone problems. The carrier rate for Gaucher disease may be as high as one in fourteen among Jewish people of Eastern European ancestry, in comparison to one in 100 among

religion-based claims simply because there is nothing essential about religion or because not all Jewish persons have Gaucher disease. Finding redress for discrimination hardly creates identity characteristics and, certainly, avoiding identity-based discrimination claims does nothing further to question them.

III. LESSONS TO BE LEARNED AND APPLIED

What relevance, if any, does this debate have to Darlene Jespersen, a non-transgender employee terminated as a result of the enforcement of gender stereotypes? Post-modern challenges to the essentialism of gender notwithstanding, non-transgender litigants have a tremendous amount to learn from transgender litigants. Some suits brought by transgender litigants have moved courts forward in their understanding about the inelasticity of gender for such persons. A medical model has allowed litigators to introduce scientifically-based reasoning that for certain persons, the requirement that they conform to normative stereotypes is exceedingly harmful. Perhaps believing that it is only at the margins of the community that the imposition of normative stereotypes is harmful, some courts have allowed their imposition. Because doing so at the margins would not transform the social norm itself, or its force in the main, such courts have not necessarily departed from the collective hunch theory.¹⁰² For example, in *Doe* and *Enriquez*, two state courts agreed that a school's and an employer's enforcement of normative gender stereotypes of dress and appearance impermissibly excluded persons from an education and a work environment, respectively.

The job now for litigators advancing similar claims for non-transgender litigants is to convince courts that the harms experienced by these plaintiffs is every bit as real and significant as that experienced by the transgender litigants. Part of the difficulty of this challenge is the courts' (over-)identification with non-transgender litigants and their subscription to the collective hunch theory.¹⁰³ The role of progressive lawyers and litigants concerned about the harmful effects of enforced gender norms should be to call into question the collective hunch by exposing its limited applicability.

those in the general population. See National Gaucher Foundation Homepage, <http://www.gaucherdisease.org> (last visited Dec. 20, 2005).

¹⁰² As the New Jersey Superior Court explained, "A person who is discriminated against because he changes his gender from male to female is being discriminated against because he or she is a member of a *very small minority* whose condition remains incomprehensible to most individuals." *Enriquez v. West. Jersey Health Sys.*, 777 A.2d 365, 372 (N.J. Super Ct. App. Div. 2001) (emphasis added).

¹⁰³ Is conformity to gender norms even so easy for most individuals, given all the energy put into their continued enforcement? In other words, why would anyone care about the policing of gender norms when it is so easy for everyone to fall into them? The author would like to thank Anne Goldstein for raising these questions.

Post-modern social constructionists have gone far in laying the groundwork for robust enforcement of sex discrimination laws. It is, after all, their insight that nothing is natural or essential about sex stereotypes that has, in significant part, moved sex discrimination jurisprudence beyond cases protecting women qua women and men qua men. As a result of that critical work, courts have acknowledged claims rooted in enforcement of invidious stereotypes as sex discrimination.

The limits of the post-modern insight may be seen, however, in cases like *Jespersen*. What may move courts beyond those limits is to strengthen and personalize the harm in the same ways that incorporating disability claims into cases brought by transgender litigants has done. A critical point to be made in future cases is that a person's core sense of gender identity is innate and impervious to change.¹⁰⁴ This is true for transgender and non-transgender individuals alike:

[J]ust as a person's core gender identity as male or female is innate, a person's relative degree of masculinity or femininity is also deep-seated and generally impervious to manipulation or change. While individuals can alter the way they dress and can change their appearance to some degree through the use of make-up and other accessories, there is a core aspect of gender identity and gender expression that is deeply rooted and that cannot be changed.¹⁰⁵

One author has advanced an interesting thought experiment that could be used effectively in litigation. Daphne Scholinski writes and asks readers to imagine being forced to express their gender identity in a way inconsistent with their sense of self, and to imagine doing so not as a lark, but rather as against one's will—first, for a day, then for a week, and then for an extended period of time. “Try changing things,” she instructs.¹⁰⁶ “Try

¹⁰⁴ This issue was raised before the Ninth Circuit. Brief of National Center for Lesbian Rights & Transgender Law Center as Amici Curiae Supporting Petitioner, *Jespersen v. Harrah's Operating Co., Inc.*, 392 F.3d 1076 (9th Cir. 2004) (No. 03-15045). The brief cites the following to support this principle: *Kosilek v. Maloney*, 221 F. Supp.2d 156, 163 (D. Mass. 2002) (“The consensus of medical professionals is that transsexualism is biological and innate.”); *Doe v. McConn*, 489 F. Supp. 76, 78 (S.D. Tex. 1980) (“Most, if not all, specialists in gender identity are agreed that the transsexual condition establishes itself very early, before the child is capable of elective choice in the matter, probably in the first two years of life; some say even earlier, before birth during the fetal period.”); *In re Heilig*, 816 A.2d 68, 78 (Md. Ct. App. 2003). The *Heilig* court stated that, “[b]ecause transsexualism is universally recognized as inherent, rather than chosen, psychotherapy will never succeed in ‘curing’ the patient.” *Id.* at n.13.

¹⁰⁵ See Brief of National Center for Lesbian Rights & Transgender Law Center, *supra* note 105.

¹⁰⁶ SCHOLINSKI, *supra* note 46, at xi.

it. Wear an outfit that is utterly foreign—a narrow skirt when what you prefer is a loose shift of a dress. Torn-up black jeans when what you like are pin-striped wool trousers. See how far you can contradict your nature. Feel how your soul rebels.”¹⁰⁷ For most people who seriously engage the thought experiment, the result is the same—serious discomfort that could translate into humiliation and degradation of one’s sense of self. For a judge, or even a jury, willing to seriously undertake this exercise, the result hopefully would be to push the boundaries of the collective hunch theory.

One final comment about the interplay between the post-modern approach of social construction and the inelasticity of gender identity bears mention. While these approaches may seem diametrically opposed, they are easily reconciled. At the most basic level, even physical objects, much less ideas or concepts, can be both in motion and unmoving (at rest), at the same time depending on the point of reference. This fundamental concept, which inspired Albert Einstein to develop his theory of relativity,¹⁰⁸ is based on Einstein’s observation of two trains in motion. He recognized that, to a person traveling at sixty miles per hour on a train in motion, another person sitting in a second train moving at precisely the same speed appears to be at rest. Indeed, the person sitting on either train, when asked, would answer that he or she is sitting still. Einstein’s observation illustrates in a physical context the same phenomenon offered by this Article, that gender may be socially constructed and responsive to social, political, and cultural pressures, but that a given individual’s gender identity remains impervious to change.

Another way to reconcile these seemingly inconsistent positions is to acknowledge that, although the descriptive aspect of gender may be socially constructed, as an ascriptive facet of human identity, gender is not socially constructed for any particular individual. That is to say, even though lives are given meaning and structured by social norms that are contingent, the fact still remains that for any given individual, the experience of inhabiting those norms feels, and in some sense is, non-contingent.

¹⁰⁷ *Id.*

¹⁰⁸ Einstein makes extensive use of the train analogy in his popular book, *RELATIVITY: THE SPECIAL AND GENERAL THEORY* (Robert W. Lawson trans., 1961). Einstein also used the analogy of observing moving trains in his original article on special relativity, published in 1905. Einstein, *Zur Elektrodynamik bewegter Körper* [On the electrodynamics of moving bodies], 17 *Annalen der Physik* 891-921 (1905). An English translation of the paper is available in JOHN STACHEL, *EINSTEIN’S MIRACULOUS YEAR: FIVE PAPERS THAT CHANGED THE FACE OF PHYSICS* 123-60 (2d ed. 2005). On the third page, Einstein invokes a moving train to introduce his ideas about simultaneity: “We have to bear in mind that all our judgments involving time are always judgments about simultaneous events. If, for example, I say that ‘the train arrives here at 7 o’clock,’ that means, more or less, ‘the pointing of the small hand of my watch to 7 and the arrival of the train are simultaneous events.’” *Id.* at 125.

IV. CONCLUSION

Cases in which courts affirm the enforcement of sex-differentiated dress requirements in employment reveal how little judges understand the harms associated with forced gender conformity for persons whose gender identity and expression are not shared by the judges. Cases brought by transgender litigants provide insight into what may move judges to understand both the harms of forced gender conformity for those individuals and the inelasticity of gender identity. Part of the insight is that medicalizing the experience of gender identity both strengthens the realness of the claims and offers a way for judges to remove themselves as the appropriate measure for the discomfort a litigant may experience. Objections to bringing disability claims on behalf of transgender litigants are principally rooted in misunderstandings of disability law and should be rejected by progressive minded advocates and litigants. The rejection of these objections clears the way for non-transgender litigants to bolster challenges to sex-differentiated dress requirements and to advance a conception of gender identity that ultimately strengthens claims brought by transgender and non-transgender plaintiffs alike.
